

Design a Value Growth Architecture™ for Your Portfolio

What is Value Growth Architecture?

*Discover and
evaluate growth
actions and
strategies*

Most management teams have ideas on how to grow their company. As their financial partners, how can you help the team make optimal decisions investing in and prioritizing growth initiatives?

Which ideas will produce value growth the fastest? Which ideas will grow EBITDA? Will the ideas improve the predictability of future cash flow (Quality of Earnings) and drive valuation multiples higher when positioning the business for sale?

*Collaborate
with functional
experts to develop
growth ideas*

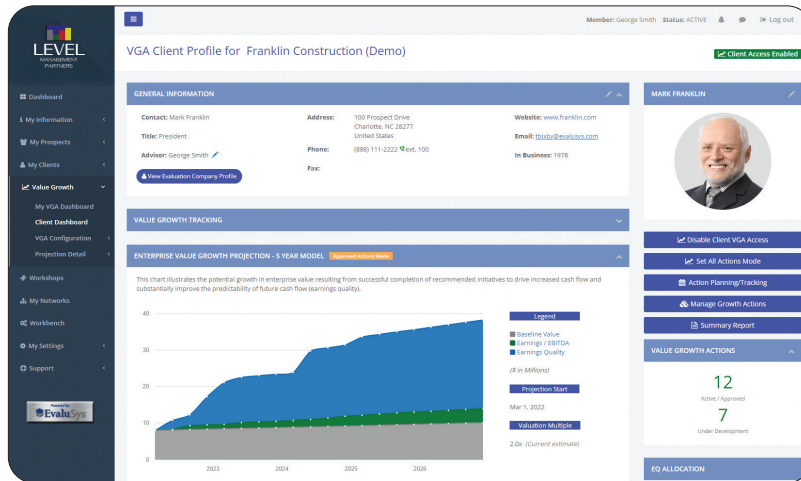

LEVEL's execution of Value Growth Architecture addresses these questions with a disciplined, collaborative technology-forward process involving talented professionals in the fields of finance, law, investment banking, business management and operations improvement, human capital optimization and change leadership.

*Inject financial
discipline to
optimize growth
investments*

Broad Expertise, Unmatched Process and State-of-the-Art Tools

LEVEL delivers Value Growth Architecture by leveraging its proprietary **LEVEL Expert Network™** and its unmatched knowledge and experience utilizing the **Value Growth Architecture™** toolset within **EvalSys®**, a technology company founded by LEVEL CEO Tom Bixby in 2007.

The LEVEL Expert Network features experienced CFOs, attorneys, investment bankers, and talented specialists in marketing, sales management, lean manufacturing, supply chain optimization, general business operations, technology, human resources, executive leadership, and product/service innovation.

Value Growth Architecture™ was developed in 2018 by EvaluSys based on methodology and process envisioned by LEVEL Management Partners in 2014.

Value Growth Architecture (VGA) offers a disciplined approach to identifying actions representing the building blocks of enterprise value growth. The estimated value contribution of each recommended action is quantified, allowing for planning and prioritization of the targeted investments needed to achieve value growth objectives.

VGA tools are integrated within the EvaluSys® business evaluation platform, permitting use of the complete collection of business management process assessments to reveal potential value enhancing actions to jump start the planning process.

LEVEL's Value Growth Architecture solution is available as a strategic planning service for your existing portfolio companies, or as a sophisticated deal-phase program informing deal pricing while establishing action plans for post-acquisition integration and rapid value acceleration.
